

Implementation Assistance

NETconsent is an enterprise application, which will impact many areas of your business. In certain situations it may also be used as an instrument of change, obliging a cultural shift in the way staff go about their day to day jobs.

Therefore the implications need to be carefully managed in order to ensure the impact of the new solution brings all its intended benefits. It is essential that its introduction is carefully considered and planned.

Following many successful implementations, NETconsent has developed a set of offerings to help support you, with the introduction of NETconsent into your organisation.

NETconsent offerings are designed to:

- help identify all the issues
- document roles and responsibilities
- agree common procedures and processes
- provide technical implementation support

Business Management

Our experience shows that NETconsent is a line of business solution that should be managed by a business manager with proactive support from IT. Sorting out certain core issues from the outset greatly enhances the likelihood of a successful project.

It is highly desirable to enlist the support of a Senior Manager (Director) to act as the Project Sponsor. This gives the project the leverage that is needed to make sure your staff understand the implication of the introduction of NETconsent on the organisation, as well as them individually.

- **Impact Workshop**
Understanding the issues that will affect the business and then using the Project Sponsor to help get across the company's position is a key starting point which we suggest should be undertaken at the outset of the project.
- **Project Planning Workshop**
Implementing NETconsent should be treated no differently from other new systems and, with our extensive experience in this area, we have developed a workshop to help you plan this project effectively.
- **Full Project Management Service**
If required, NETconsent can provide a full project management service for the implementation of NETconsent within your organisation.

Technical Installation

The technical installation of NETconsent is quite straight forward. Depending upon your own internal skill set and resource availability, NETconsent staff can provide:

- **Planning Workshop**
This enables everyone to fully understand the technical impact of a NETconsent installation.
- **Technical Training**
Ensures your staff are fully briefed to implement and support NETconsent.
- **Managed service**
NETconsent can fully manage the NETconsent installation and undertake new installations and/or systems upgrades as and when they might happen.
- **Support**
Provide your technical staff with ongoing advice or support critical stages of an implementation.

Training

In addition NETconsent can provide training sessions for the key players.

- **NETconsent System Coordinator Training**
- **Policy Manager Training**
- **Auditor or Compliance Reporting**

Whatever you need the NETconsent team has the experience and skills to help you implement NETconsent effectively within your organisation and to deliver the planned business benefits.
